

How do I download my TikTok data on my smartphone?

In this short guide, we will show you the **9 steps** to accessing and downloading your TikTok data. Following the steps in this guide should take you around **5-minutes**.

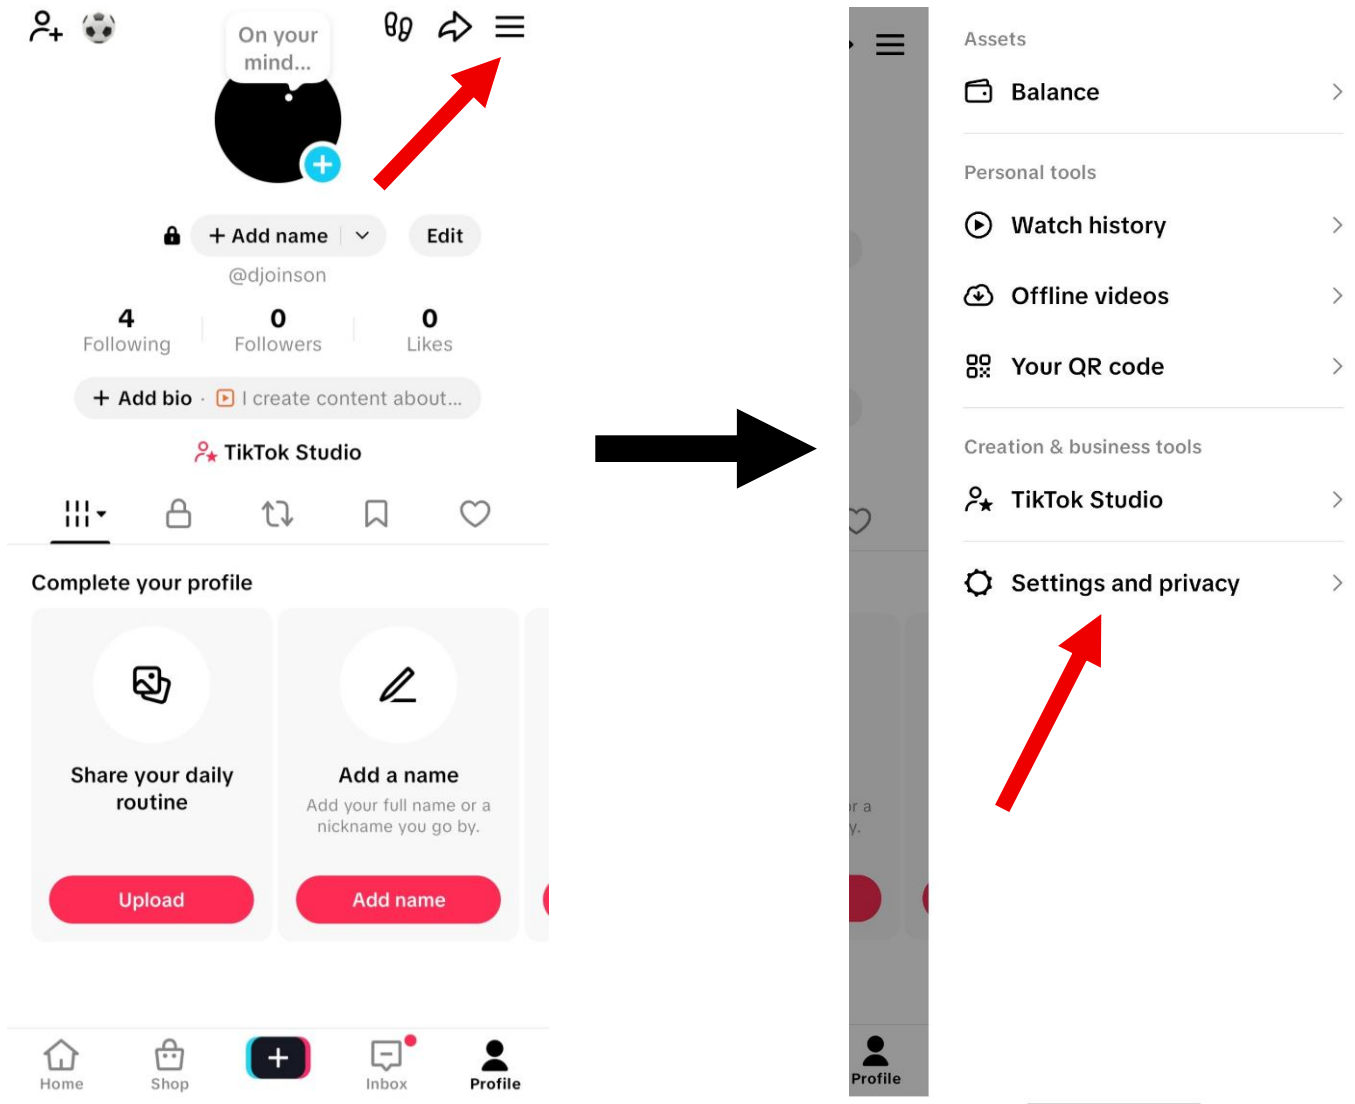

Step 1: Click on Profile

First, you need to click on **Profile**, which is at the bottom right of your screen.

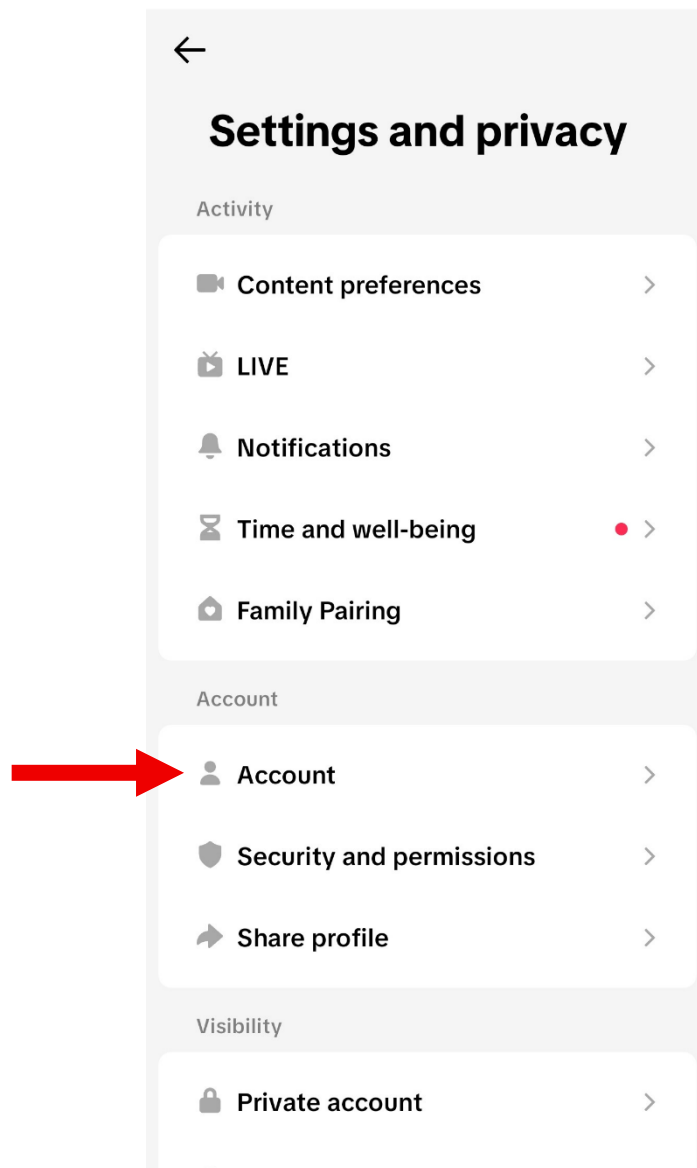

Step 2: Click on Settings

Next you need to open your settings. First, click on the **three black lines** at the top right of the screen. A new tab will appear, and you've got to click on **Settings and privacy**.

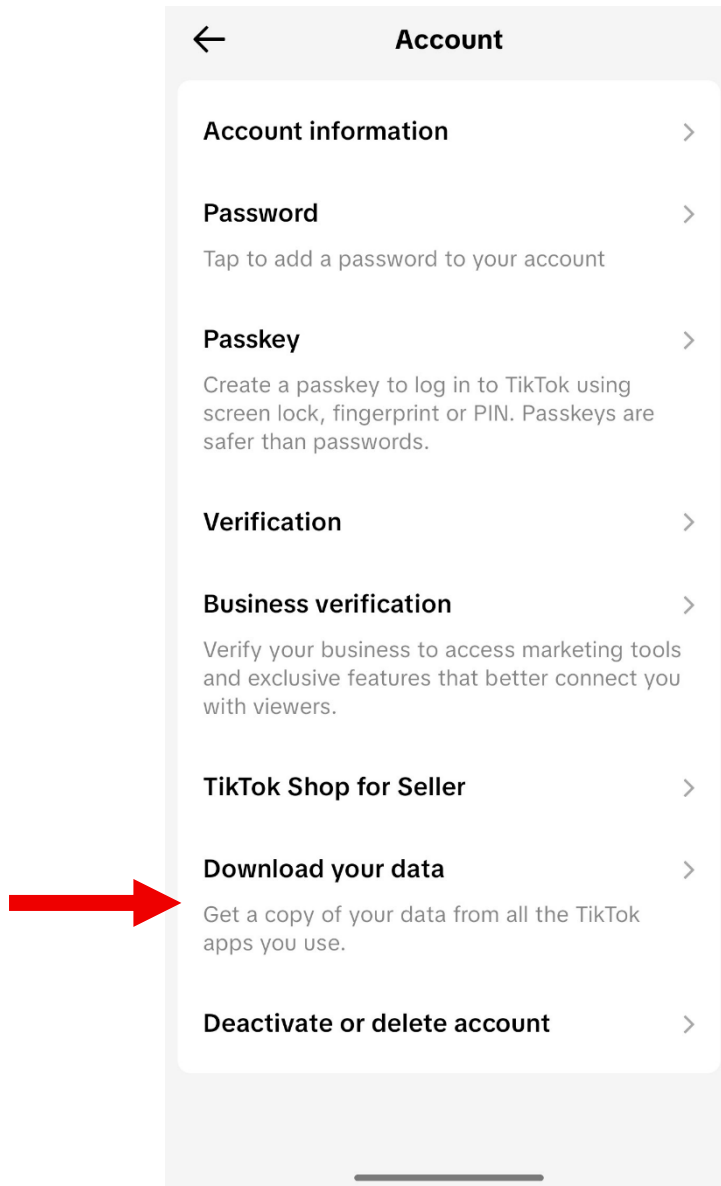

Step 3: Click on Account

Now you're in Settings and privacy. Next you must click on **Account**.

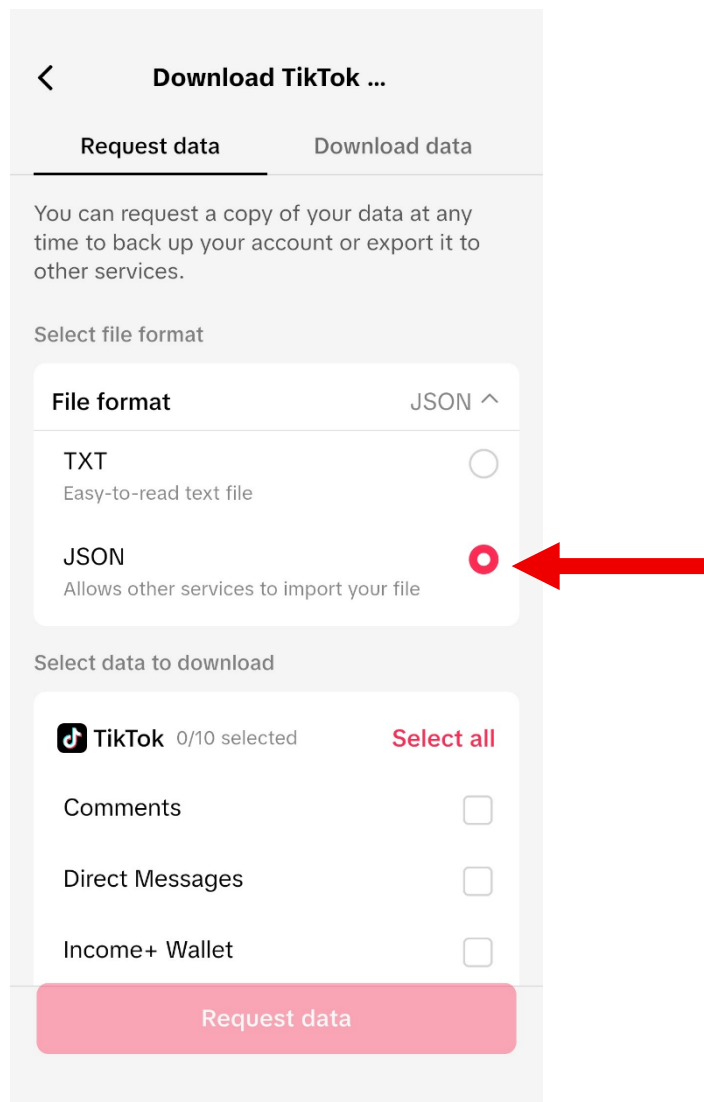

Step 4: Click on Download your data

Now you're in Account, click on **Download your data**.

Step 5: Choose to download your data as a JSON

Now you're in Download your data, where you can choose exactly what data you want to download from TikTok. First, you must choose what format to download your data in. For our study, we need you to download data as a **JSON**, as it requires less storage.

Step 6: Select the data you want to download

Scroll down, and you'll see all the types of data you can download from TikTok. For our study, we're only asking you to donate three types: **Likes and Favourites**, **Profile and Settings**, and **Your Activity**. For the next step, you'll have to check these three boxes. When you donate your data, we will automatically remove all the content that could identify who you are, for example your TikTok username. Once you've checked these three boxes, click **Request data**.

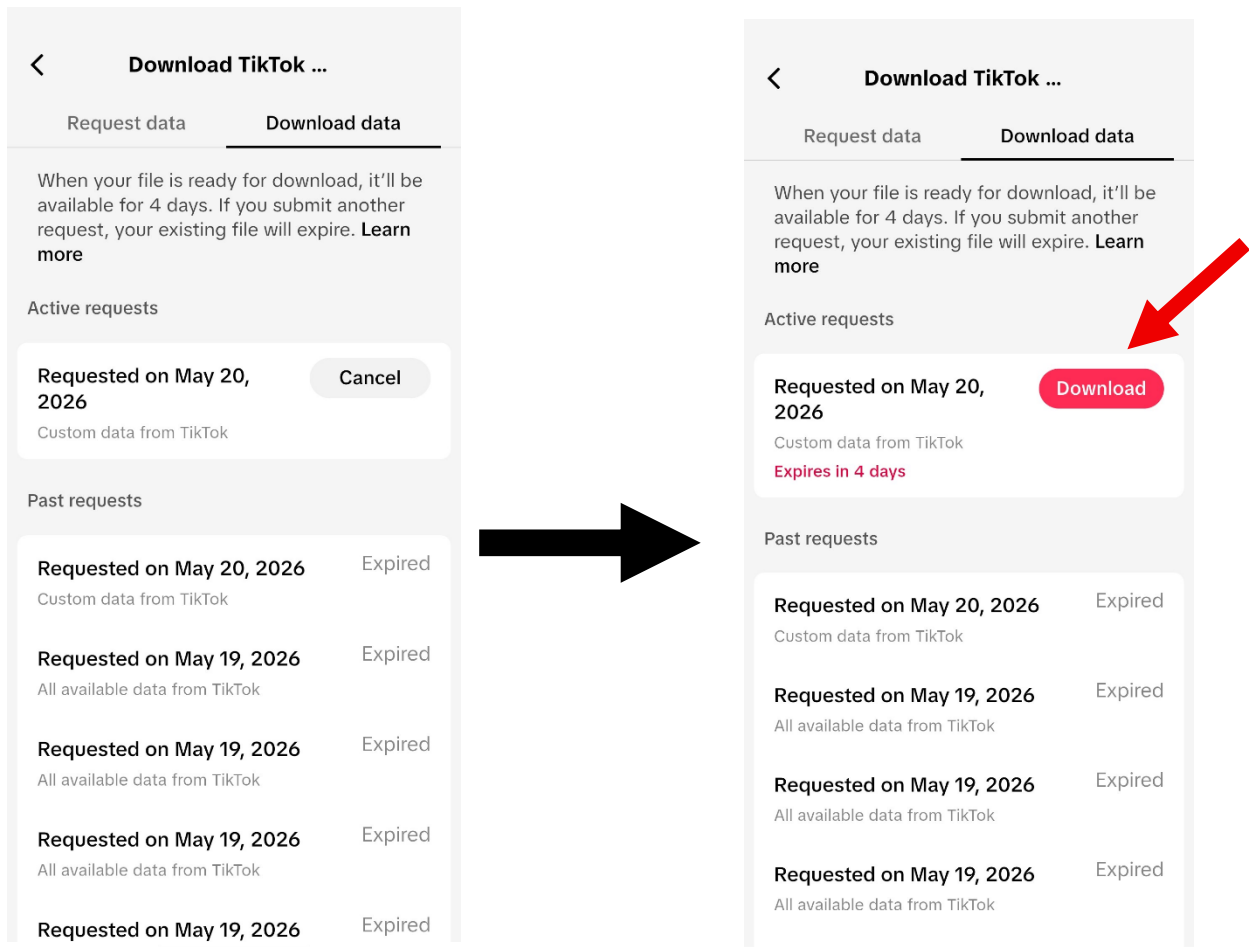

The screenshot shows the 'Download TikTok ...' screen with a back arrow and two tabs: 'Request data' (active) and 'Download data'. A list of data types is shown with checkboxes. Three items are checked, each with a red arrow pointing to the checkbox:

- Comments ☐
- Direct Messages ☐
- Income+ Wallet ☐
- Likes and Favourites ☒
- Location Reviews ☐
- Posts ☐
- Profile and Settings ☒
- TikTok LIVE ☐
- TikTok Shop ☐
- Your Activity ☒
Includes your watch and search history, ad interests and Off-TikTok Activity, and other activity on TikTok

A red button labeled 'Request data' is at the bottom.

Step 7: Wait for your data to be ready

Now you've sent a request to TikTok for your data. However, it might take a bit of time for them to get this data ready. Depending on how much you use TikTok, this could take a few minutes, or up to a day. **We recommend waiting for a couple hours and checking whether the data is ready then.** Once it is ready, you'll see a new red button, Download, which you must click.

Step 8: Complete verification

Before you download the data, you must complete a **verification**. After you click download, you'll see this screen. TikTok will have sent you an email with a 6-number verification code. Complete this, and the data will automatically download.

Verify your account to download

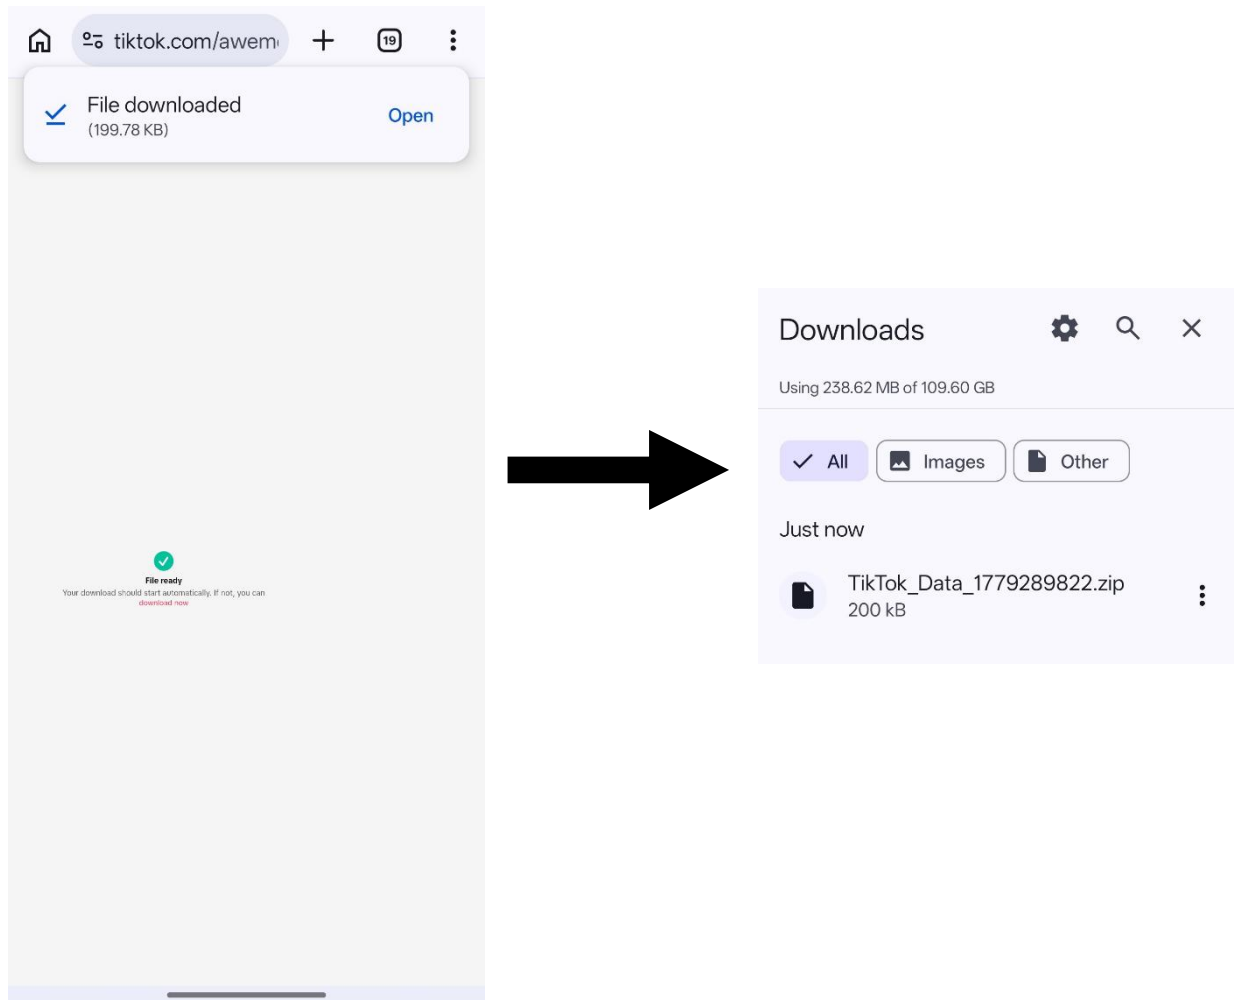

We'll send a code to your email
d***n@gmail.com.

Step 9: Your data has been downloaded!

You've finished all the steps, and your data is now downloaded. The data is downloaded as a **Zip file**. **This file is what we will ask you to donate during the main study.**

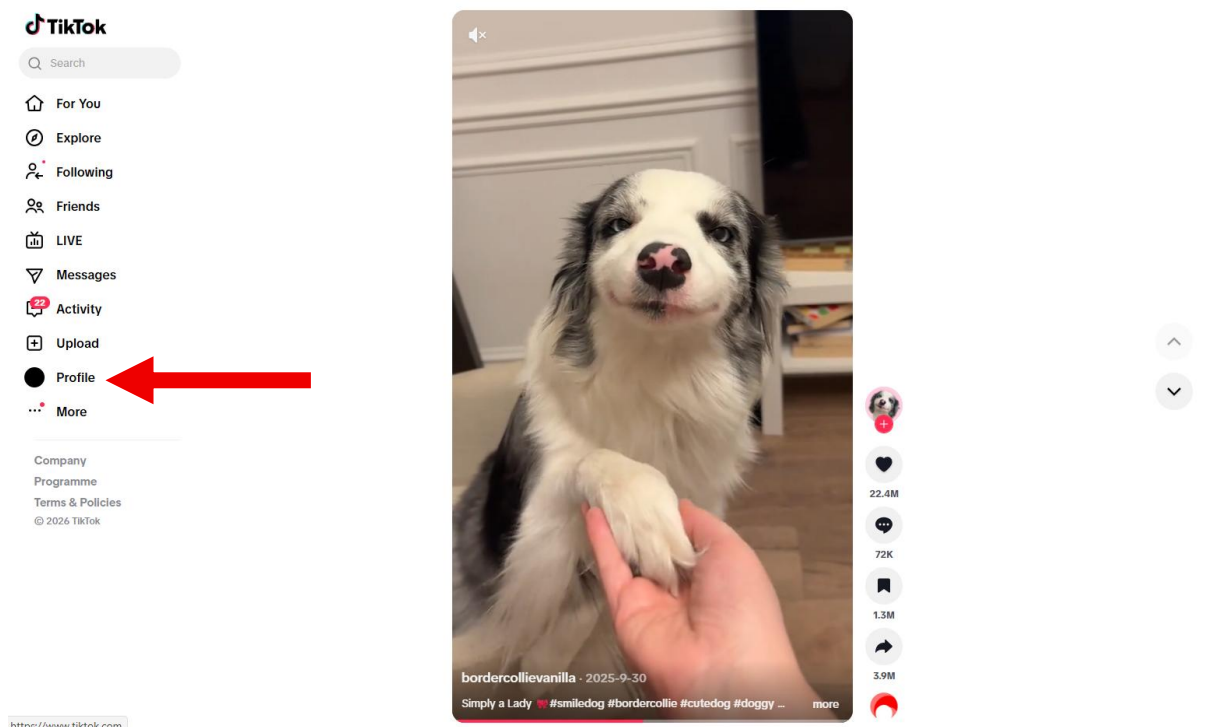

How do I download my TikTok data on my computer?

In this short guide, we will show you the **8 steps** to accessing and downloading your TikTok data. Following the steps in this guide should take you around **5-minutes**.

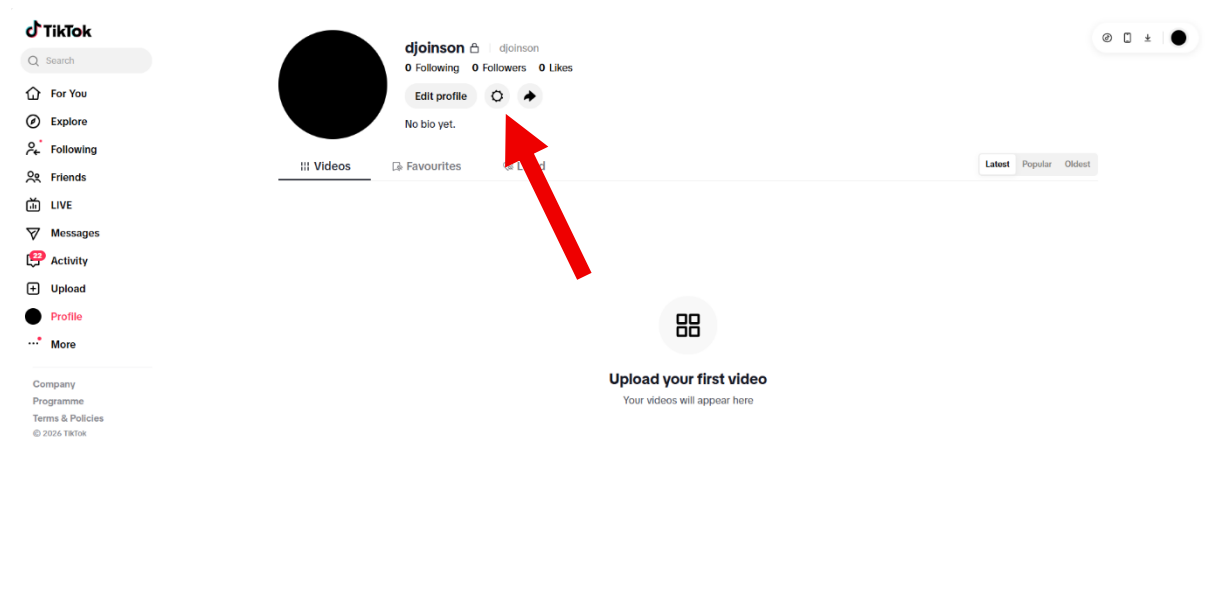

Step 1: Click on Profile

First, you need to click on **Profile**, which is at the left of your screen.

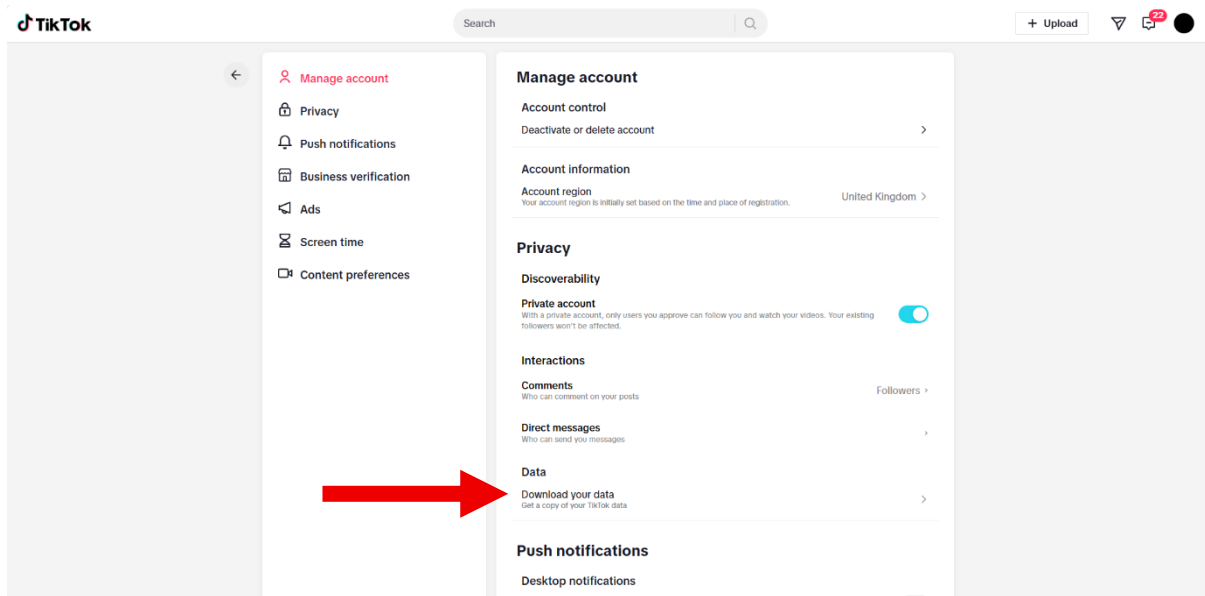

Step 2: Click on Settings

Next you need to open your **settings**, which is the gear button next to Edit profile.

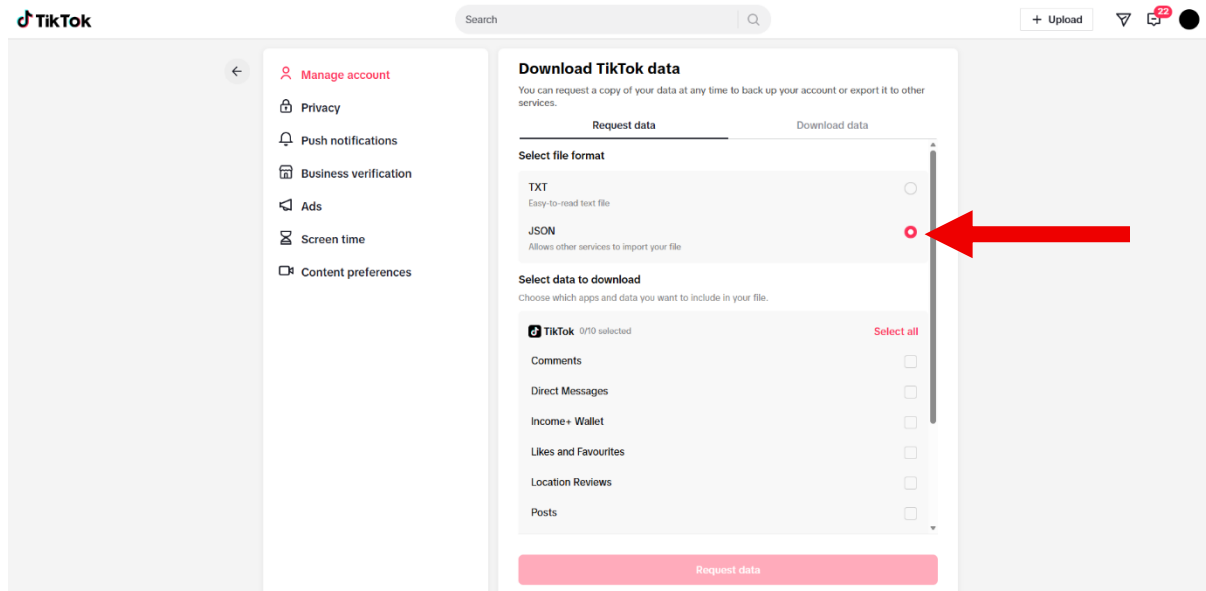

Step 3: Click on Download your data

Now you're in Settings. Scroll down to the **Privacy section** and press on **Download your data**.

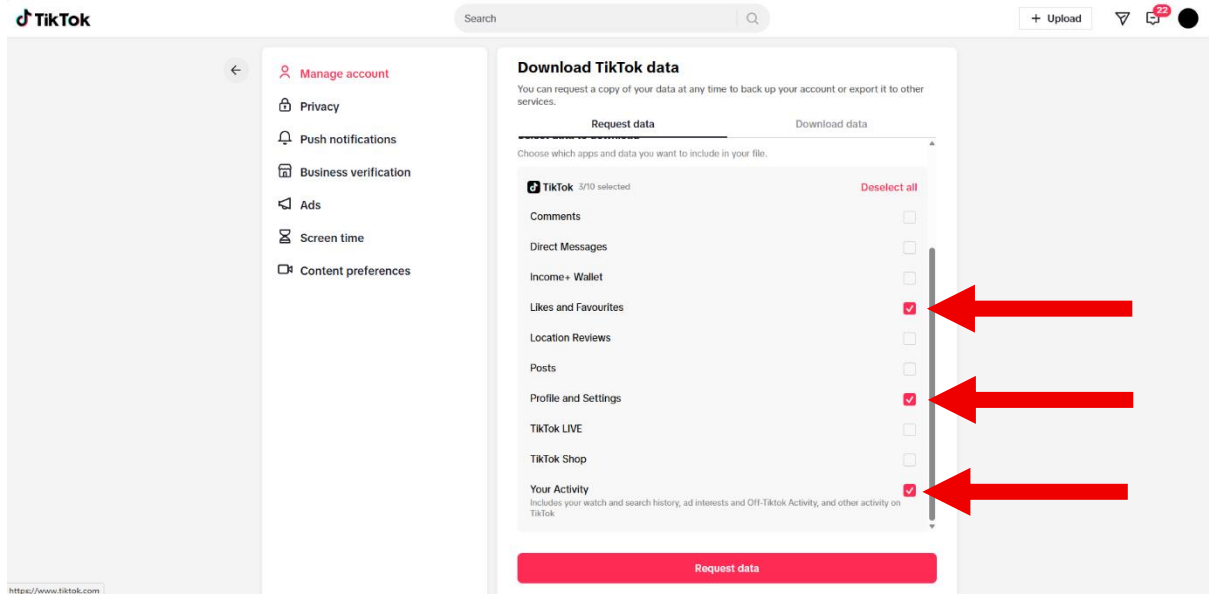

Step 4: Choose to download your data as a JSON

Now you're in Download your data, where you can choose exactly what data you want to download from TikTok. First, you must choose what format to download your data in. For our study, we need you to download data as a **JSON**, as it requires less storage.
